

Viviana Homan

Product Designer

Product Designer with 3+ years designing end to end, from government platforms and dense financial tools for the US market, to a consumer app couples use to plan their wedding. A contract editor for legal counsels in the Netherlands and a qualification platform for the Saudi Ministry of HR in English and RTL Arabic. Two years owning the financial modules of a US enterprise construction platform.

Work experience

Ingenious.Build — Construction Management Software (B2B SaaS) · US

Oct 2024 — Jul 2026

Sole product designer across two product teams, owning financial modules of an enterprise construction platform used by major US real estate and construction firms to manage multi-million-dollar budgets.

- Owned the Budget Module, the platform's most complex area, and designed more than a dozen new features for it. Redesigned the core budgeting experience around a denser view and faster line-item entry.
- Redesigned the project-level Cash Flow module and designed cash flow for the Capital Planning initiative, where teams compare projects and plan estimated spend for each of them.
- Translated business requirements and user insights into validated solutions for web and mobile, from process mapping and discovery through prototyping, usability testing, and handoff to engineering.
- Worked closely with engineers and product teams to align design solutions with roadmap priorities and technical constraints.
- Introduced AI-assisted prototyping and research analysis (Claude Code), later adopted by the wider design team.

kiedyslub.pl — Wedding management platform · Poland

Product Designer (freelance) · 2026

- Working closely with a team, shaped the product from strategy and brand to UX/UI, connecting printed invitations with a digital experience for couples and their guests.
- Worked across the wedding planning tools that bring the whole organization into one web app: wedding websites with QR-linked RSVP, a table planner, and a cost calculator.

Visual Contracts — SaaS for business and legal counsels · Netherlands

Mar 2024 — Jun 2024

- Redesigned the contract editor, the core of the product: the full flow of creating, editing, and styling contracts, making dense legal content plain and easy to work with.
- Delivered a reusable design system grounded in Ant Design.
- The features I delivered directly enabled the company to secure acceptance into investment programs.

Boldare — Software House · Poland / Saudi Arabia

Jul 2022 — Oct 2023

- Sole designer on a scrum team building a qualification verification platform for the Saudi Ministry. Owned the candidate, verifier, and admin journeys from business rules through hi-fi UI and testing.
- Designed the platform's most complex feature: verifying real employment experience, as a guided flow that calculates total experience and surfaces what's missing.
- Delivered the product in English and RTL Arabic, replacing a slow offline accreditation process with a self-serve digital one.
- Redesigned a related external platform, improving usability through UX audits and data analysis.
